RIRW27B tabletop-reader product reference - prepared reference

Applicability

RIRW27B tabletop UHF reader with the selected interface. The archived contact details are omitted from the public prepared reference.

RIRW27B tabletop-reader product reference

The RIRW27B hardware sheet describes multiple external-interface options. Confirm the interface and supply arrangement of the delivered unit before applying the Type-C-only setup described for a different tabletop model.

Use the connected application to control filtering and verify the target record after conversion or rewriting. The bilingual sheet's ceiling-antenna heading does not override its tabletop ordering-code evidence.

Before handover

- Confirm the supplied interface and supported host application.

- Verify the intended tag and business record at the actual read boundary.

Document information

This is an independently prepared English reference based on the reviewed technical material. It is not a manufacturer-issued original, does not replace the delivered hardware instructions and does not add a manufacturer warranty or certification.
