AS9010 WD888 remote-controller functions - prepared reference

Applicability

AS9010 with WD888 controller. Tuya instructions require the Wi-Fi hardware option and the supported app/controller revision.

WD888 remote-controller functions

The dated Chinese sheet separates channel signal/noise, gain, threshold, receiving-window and synchronization controls. Confirmed changes are saved; cancel or exit abandons the unconfirmed current adjustment.

Display-dependent functions such as viewing the software version are not available on every variant. Match the actual board and display before following the menu, and verify the protected passage again after changes.

Before handover

- Identify the controller and revision before applying a menu or wiring reference.

- Test the actual tags with normal store equipment operating, then retain the accepted settings.

Document information

This is an independently prepared English reference based on the reviewed technical material. It is not a manufacturer-issued original, does not replace the delivered hardware instructions and does not add a manufacturer warranty or certification.
