AS9010 Tuya Wi-Fi pairing - prepared reference

Applicability

AS9010 Wi-Fi-equipped WD888 controller and supported Tuya Smart app; 2.4 GHz internet-connected router required.

Tuya Wi-Fi pairing

Use a Wi-Fi-equipped AS9010, a supported Tuya Smart application and an internet-connected 2.4 GHz router. Put the delivered controller into its documented pairing state and wait for both device and app confirmation before attempting remote setup.

The initial app owner shares the device with additional operators. Confirm the site network details and signal during handover; if the network name or password changes, verify the connection again instead of assuming the old pairing still works.

Before handover

- Identify the controller and revision before applying a menu or wiring reference.

- Test the actual tags with normal store equipment operating, then retain the accepted settings.

Document information

This is an independently prepared English reference based on the reviewed technical material. It is not a manufacturer-issued original, does not replace the delivered hardware instructions and does not add a manufacturer warranty or certification.
