RIRP02 legacy bilingual specification - prepared reference

Applicability

RIRP02 printer. The older bilingual sheet and later manual/specification have some housing/supply differences; use the delivered unit's rating label and selected interface.

RIRP02 legacy bilingual specification

The bilingual sheet describes the RIRP02 printer's media, ribbon and interface configuration. Confirm the housing and supply rating of the delivered unit because the archive also contains a longer manual and later hardware sheet with differing details.

Use a media sample to qualify the label path and selected print/encode workflow. The short specification is not a substitute for the separate media and RFID calibration procedures in the applicable user guide.

Before handover

- Match the printer hardware, media and RFID option before starting calibration.

- Verify label position and the encoded tag through separate feed and read tests.

Document information

This is an independently prepared English reference based on the reviewed technical material. It is not a manufacturer-issued original, does not replace the delivered hardware instructions and does not add a manufacturer warranty or certification.
